

Question of the Day

What are backflow assemblies?

"Backflow prevention assemblies are installed to protect your drinking water from potential sources of contamination. The only way to ensure that they are working properly is to have them tested by a certified Backflow Assembly Tester. **It's also the law.**"

-Seattle.gov

Do we have these assemblies here in Dockton?

Yes we do!!!

Here are two types of assemblies found here in Dockton: DCVA (double check valve assembly) and RPBA (reduced pressure backflow assembly)

DVC

RPBA

Where are these assemblies found?

They should be found on the resident's side of their water meter.

How often should these assemblies (DCVA,RPBA) be checked and tested by a certified BAT (backflow assembly tester)?

Every year!

Why should these assemblies be tested every year???

Because contamination may enter into our drinking water lines and cause health risks to all!!!

Please let us know if you have one of these assemblies! Contact us with concerns and questions!

We so much appreciate You!!!!
