

FRIDAY LETTER

July 13, 2018

1. **Cleaning the contact basin.** We have a bid from LiquiVision to clean the basin this winter for a cost a little less than \$5,000. This seems a little pricey, but Dave and I think we should accept it. They will clean the sediment from the floor and remove the black manganese stain from the walls. We won't have to drain the basin. Most important it will be completely safe, done by professionals that do this work every day. Without objection from the Board, we will go ahead and schedule the work.
2. **Replacing the flow meter.** As reported earlier, the meter that records pumped water at the Springs is both out of calibration and obsolete. The flow tube part of the meter needs to be replaced. The cost is \$1,699. Again, without objection from the Board, we will go ahead and order this critical replacement part. I

Kelly
